PrimeKey and Linagora organize for the first time a European seminar “EJBCA – Industrial strength open source PKI” at the Linux Solution exhibition in Paris on the 31st of January 2007.

Stockholm, Sweden and Paris, France – 4 January 2007 – PrimeKey Solutions AB, a Swedish IT security company and Linagora SA, a French Open Source IT company, announce that they will organize for the first time a free seminar on “**Enterprise Java Beans Certificate Authority, EJBCA**” during and in collaboration with the Linux Solution exhibition on the 31st of January 2007 at the exhibition centre of CNIT in Paris La Défense.

The seminar offers IT business leaders, IT managers and experts in the data security field profound insights into the features and basic functions of EJBCA, how to plan, install, operate and maintain complex PKIs based on EJBCA. The speakers represent recognized personalities in their field, clients and experts as well as business leaders. This first round aims at creating a meeting place for exchange of experience and dialogue among experts and business leaders.

“We are delighted to organize this important event together with Linagora, our partner in France. Hundreds of companies and organizations around the world are now downloading and using EJBCA in their operations,” says Konstantin Papaxanthis, Chief Executive Officer at PrimeKey.

“This seminar is a very exciting event. All companies need to secure their IT systems. Therefore knowledge about EJBCA, the new “killer PKI” in the Open Source field, is very important. PrimeKey manages perfectly its community and Linagora is proud to be one of the leading contributors of this PKI Open Source Solution”, says Alexandre Zapolsky, Chief Executive Officer at LINAGORA.

About PrimeKey Solutions AB

PrimeKey Solutions AB is a Swedish IT-security company with niched competence in information and system security and product development within Public Key Infrastructure (PKI) and smart card appliances. PrimeKey’s vision is to provide state-of-the-art solutions that integrate with customer application environments.
